---

Hi Gary,

I remembered long ago our back & forth with HQ regarding PCLs, risk methods, and of course the RBA. During this time, you had asked me to prepare a memo to forward to Marlene Berg. Attached is that memo. It has a summary of PCLs carried forward into the FS, but also some of the others that were not carried forward... including tissue PCLs for hardhead catfish, mussels, and blue crab. There is also some stuff on their calculations.

Maybe this memo (back from the dead) will help us in our current quest. NOTE: this memo was generated BEFORE we changed the RBA to 1.0.

I knew I had this dang thing because we've used it many times. It just took me a while to re-find it.

Phil
